## **Notice of Start of Project**

### **Prospect Street and Tecumseth Street Road Reconstruction and Urbanization**

The Town of New Tecumseth has retained R.J. Burnside & Associates (RJB) to complete the engineering design for planned roadway improvements on Prospect Street (from Dayfoot Street to Tecumseth Street) and Tecumseth Street (from Prospect Street to the south limit) in Beeton.

This project will include full road reconstruction and urbanization, addressing roadway condition, drainage, sidewalk and active transportation needs, and municipal servicing infrastructure.

RJB will commence coordinating the design activities in March 2026, and the design phase is anticipated to be complete by Q1 2027. As part of this work, RJB will soon be completing field investigation works to survey the road and additional details such as driveways, trees, fences and topography adjacent to the right of way. There will be no disturbance to your property to undertake this work. Other pre-engineering activities that will take place will be boreholes in the existing road and a legal boundary survey of property lines.

Once a preliminary design and project scope are developed, Town staff will provide the proposed design to the Public to collect community feedback, and address questions from residents and stakeholders. Details regarding the meeting will be shared once available.

Should you have any questions or concerns related to this project, please do not hesitate to contact:

**Project Engineer**

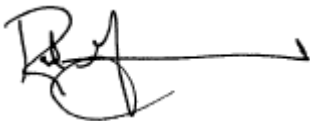

Suzanna Nilsson, P.Eng., ENV SP

In the event the resident of the house is not the property owner, we would request that this letter also be forwarded to the appropriate person/property owner. Your cooperation in order to complete this project in a timely and efficient manner would be greatly appreciated.

Respectfully,

Rob Greenwood  
Project Manager, Capital Engineering

## **Frequently Asked Questions:**

### **Will access to my property be needed?**

Access is not anticipated at this time. If access is needed, a permission to enter (PTE) will be requested prior to any access.

### **What are the paint marks on the road and sidewalk?**

Paint marking and flags in various colours identify the location of buried utilities that will assist with the design and ultimately the construction work.

### **What are they doing drilling into the road?**

Borehole investigation is a drilling process that provides a sample below the surface to determine the type, thickness, and suitability of the existing asphalt, road base, subbase, and soil materials including determining groundwater conditions.

### **When is construction planned?**

Construction is tentatively planned for summer 2027, pending completion of Dayfoot Street Phase 2a and budget approval.
